Table 4. Qwen3.5 exposure ablation.

Exposure during training	9B	27B
Answer-changing QA		
Same videos, different QA	+5.5	+5.5
Evaluation QA, no video	+31.9	+35.2
Video + evaluation QA	+38.4	+39.3
Temporal grounding		
Same videos, different QA	+2.5	+8.2
Evaluation QA, no video	+32.0	+32.3
Video + evaluation QA	+54.9	+52.5

Values are gap growth at epoch 10 (pp): $\Delta G_{10} = (O_{10} - E_{10}) - (O_0 - E_0)$, where O/E denote original/perturbed scores. QA is the macro mean over seven task/dataset pairs; grounding uses R@1 at IoU ≥ 0.7 with 10% black padding. All conditions use video and question at evaluation.
